FOR IMMEDIATE RELEASE

OPTERGY EXPANDING GLOBALLY AND RECRUITING RESELLERS AT AHR EXPO 2017

Economical Small Building Management Systems For Our Global Partners

Sammamish, WA (January 5, 2017) – Optergy, a provider of building automation and energy management products is poised to transform the market with its latest product called Proton. This product is built to simplify the process of monitoring and controlling small buildings.

Proton is the first to combine a complete supervisor into a single controller that features the industry standard BACnet protocol, as well as Modbus protocol for more effective integration of multiple building systems. Even the smallest buildings now have an economical and simple means to access their building controls and energy consumption data from any web browser anytime, anywhere. Proton can be localized to many different locales both for language and locale settings making this a truly global product.

Optergy has feature rich software products that can help drive our reseller partner business sales to new levels. Optergy products also include self-paced eLearning which lets our users get proficient at their own pace and without costly travel or certifications.

Optergy's products fit well into a number of business segments:

- **Building management system and services;** System integrators that deploy control systems with products, installation and after sales service.
- **Energy management system and services;** Electrical products such as power quality monitoring, metering, and consultative service.
- **Critical environments;** Control products for specialized applications, installation and support.
- **Original equipment manufacturing;** Manufacturers of equipment (HVAC, lighting, access control and more) that can benefit from web user interface, integration to the BMS.

Optergy is currently recruiting reseller partners in North and South America, Europe, Asia and the Middle East. **Visit Optergy at booth C1075** to get a guided tour of its products and business.
